I have been giving some thought about all of the words in the English language that have more than one meaning. *So lets have some fun,*

An example that stands out for me as a lawyer is the word Grill, is that the barbeque or a courtroom interragation of someone, or what about the word Point, is that taking aim or an argument.

How about Viral, meaning gone wild or a serious illness.

What about Season, is it the time of year or is it what you spice up your food with.

One of my favorites is the word dope which can mean an idiot or a drug or maybe an idiotic druggie.

How about the word school, a place of education or is it a bunch of fish.

For you gardners, the word Plant means to dig and place or is it a vegetable in your garden.

Company can mean a business or just your friends you hang out with.

And for clamers, does Sand mean going to the beach or smoothing out a piece of wood.

Wound means a cut or sore, but when pronounced wound it means winding up that toy for your grandchild.

Similarly, Wind means a breeze or it can be the same as wound if you have finished winding.

Had you ever thought the word Bar meaning a saloon or lounge also means to prevent or restrict some one from doing something.

Type means category or it could mean preparing an email on your computer or in my day typing a letter on a typewriter.

One I like is the word scratch, is it a minor cut or is it something you do when you have an itch.

I leave you with a point to ponder. The word is Drone, would you rather be bored to death by a dull uneducatec person or struck by an unmanned aircraft.
